

Time Tracker

Brief Note about the project

Users must login with their email and password.

We have a list of users and projects.

We can add tasks for each project and assign a user to each task(By default status is to_do).

Users can see assigned tasks for each project.

When they are working on a task they should change the status (in progress, done)

Users should be added to the logs(start times and end times).

A user can view the users involved in a project. Their logs can also be viewed.

There is an option to view monthly logs. Monthly logs include total working hours. How many hours worked by all users on each date. What project and task they worked on on each date.
